INDICATOR MATRIX | AVERAGE BY CITY WITH CONDITIONAL FORMATTING

Indicator's Average for each City

Indicator Name	Bristol	Plymouth	Portsmouth	Southampton
Air pollution: fine particulate matter (new method - concentrations of total PM2.5)				
2018	10.00	7.62	12.42	11.22
2019	9.34	7.66	10.54	9.32
2020	8.19	6.85	9.25	8.49
2021	7.63	6.84	8.29	7.84
2022	7.58	4.54	8.29	8.16
2023	6.29	5.76	6.96	6.71
Children in absolute low income families (under 16s)	15.60	15.44	17.59	19.16

KEY FINDINGS | ANALYTICAL NARRATIVE

Key findings

- Air quality has improved across all four statistical neighbours since 2018. Portsmouth remains the worst performer, sitting above the England average (50th percentile) throughout the period. Plymouth consistently performs the best.
- Southampton's air pollution percentile score of 52 in 2022 places it above the England average, indicating worse-than-average air quality relative to all local authorities in England.
- Child poverty rates have risen across all four cities since 2019, reversing the improving trend seen between 2014 and 2018. Southampton (18.1%), and Portsmouth (20.8%) both exceed the England average of 17%.
- Plymouth outperforms peers on air quality but shows comparable child poverty rates, suggesting environmental and socioeconomic determinants do not move together within this statistical neighbour group.
